# India

## Overview

Live more,  
Bank less

1

- ◆ India's growth hit a soft note in 2019, rising 5.3% yoy. Gradual climb from trough is likely in 2020
- ◆ Our growth forecasts - FY20f 5% (downside risks) and FY21f at 5.6%
- ◆ COVID19 is a key external risk in 1H20. Government spending and net exports are expected to offset weak investment demand
- ◆ The RBI remains dovish, opting for conventional and unconventional moves. Fx swaps frontload cut expectations
- ◆ Inflation peaked in January 2020 and is expected to slip below 5% by Jun20. Likely to ~3-4% by end 2020
- ◆ External balances are stable, with FX reserves at record highs
- ◆ Fiscal deficit pegged at -3.8% of GDP in FY20 and -3.5% in FY21 - heavily dependent on non-tax receipts from divestment and privatisation
- ◆ INR is expected to weaken to 2Q20, contingent on US dollar, yuan moves and central bank presence
- ◆ Short to belly of the yield curve has room to correct

# India - Growth

1Q20/FY21 Outlook

2

## Momentum indicator

### Growth momentum gauge tracks real GDP

points, 3MMA

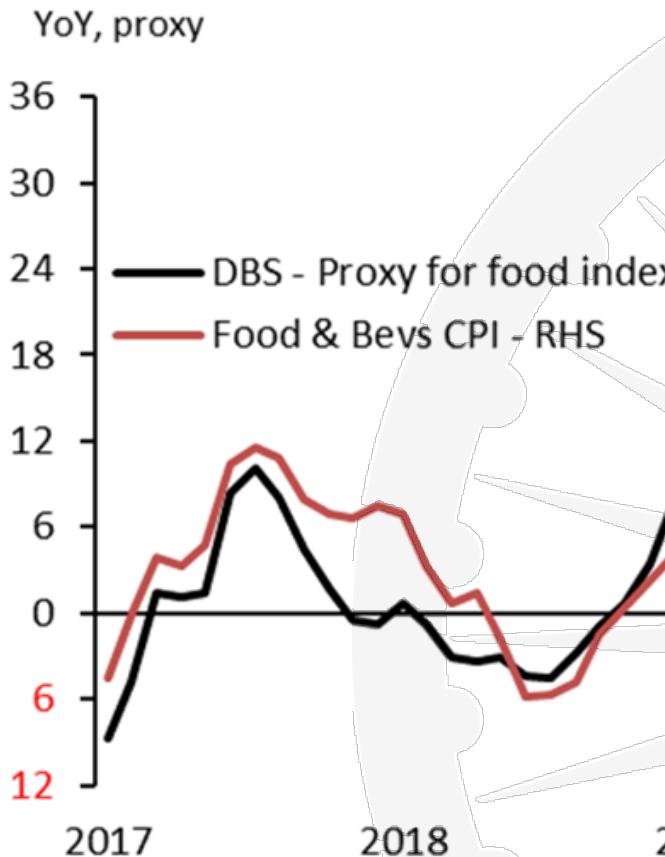

- ◆ Data for January points to bottoming out in few sectors, but on aggregate signs are of stabilisation at modest levels rather than a pick-up; **1Q20 i.e. 4QFY GDP = 4.6% y/y**
- ◆ As the festive demand passed in late 2019, strength in some sectors (e.g. auto sales) has petered out. High inflation also likely to hurt real purchasing power. January export underperformance belies hope for a hand from external trade.
- ◆ **Providing a decent counterbalance** is on track government spending (particularly if the non-tax revenues targets is brought to fruition) and public capex, with also services lending some optimism on better passenger traffic and commercial vehical sales.
- ◆ Stress on the multiple balance sheets - corporates, goverment and financial sector - is a risk for a swift recovery.
- ◆ **The global demand backdrop is challenging.**
- ◆ **Impact of COVID 19** depends on duration, intensity and spread of the infections, as goverments put containment policies in place, affecting tourism and trade capabilities.
- ◆ From a likely 5% in FY20, we expect a gradual drift up in FY21 to 5.6%, helped also by low base effects.

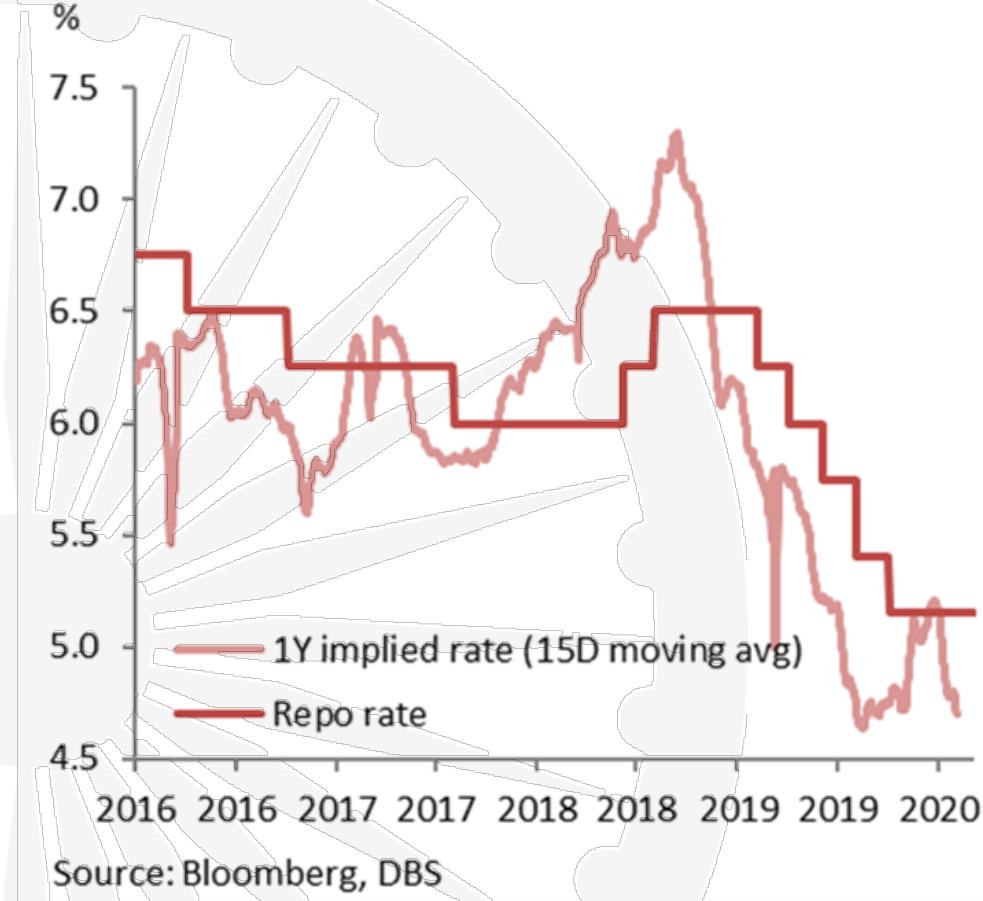

## Inflation and monetary policy

3

### Actual food inflation vs DBS food proxy

### Markets reload easing expectations

- The RBI's decisive dovish leaning is helping to narrow term premia, repo vs GSecs and GSec vs swaps. Following the US Fed's surprise cut, Governor Das affirmed there was room to lower rates as well as provide liquidity, if required. The MPC were leaning towards policy easing as soon as inflation would have come off the boil, even before the COVID19 worries surfaced. With fresh risks, markets perceive that the step towards cuts might come sooner than 2H20. Expectation for a cut will build as the April MPC nears, with liquidity push - second round of INR1trn LTROs likely April onwards - in the interim.

# Impact of COVID-19

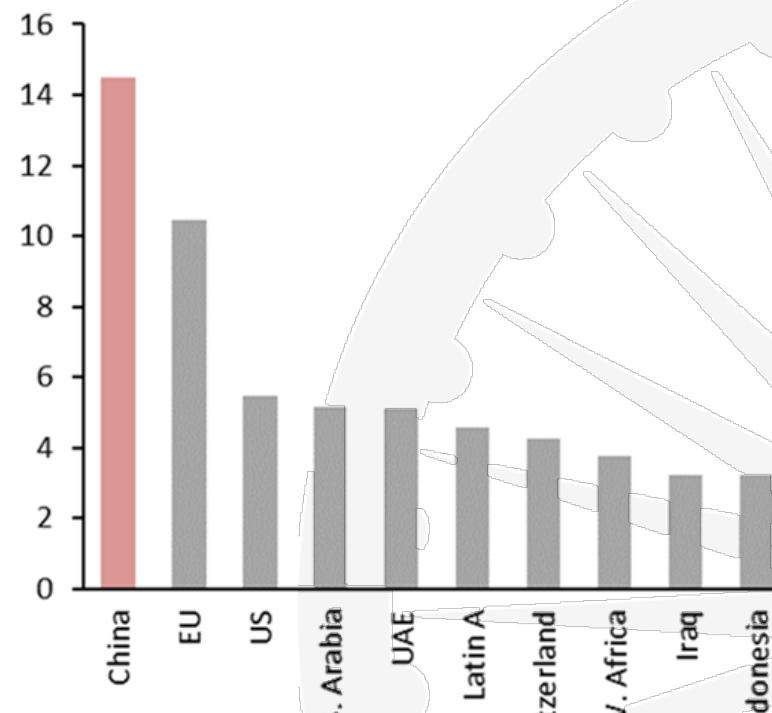

India perspective

4

India's imports: key sources

India's key export markets

◆ Key sectors feel the pressure:

- Consumer durables = >40% imported
- Electronics = >50% imported
- Auto Sector = ~20% imported
- Pharma - bulk drug intermediaries = >60% imported
- Solar modules = >60% imported

◆ India's exports to China

- Petrochemicals
- Seafood
- Textile / cotton yarn
- Gems & Jewellery
- Minerals & ores
- Organic chemicals

<b>GBP/USD</b>	1.27	1.25	1.26	1.27	1.28	1.29	1.30	1.31

## INR to step into a weaker range

- ◆ DBS FX Strategist expects the dollar index to peak with the epidemic in 2Q20 and return gains thereafter. In case COVID-19 proves to be more enduring than presumed, then the peak might be pushed back to later in the year
- ◆ The rupee at this juncture is reacting to be the broader dollar strength, cautious portfolio investors and prospects of spillover from weak global growth in light of the widening COVID-19 spread.
- ◆ Pressure will persist in the near-term as local cases rise gradually
- ◆ Beyond the COVID -19 driven peak, we expect USD INR to settle in to the trade war range
