

UNI.CORN+ 2020

Programme Duration: 11 May - 31 July 2020

Live more,
Bank less

Programme Factsheet

What to expect

- Industry and technical experience working with DBS's core units like the Consumer Banking Group and Institutional Banking Group
- Create and develop a working prototype for real, tech-driven solutions in teams
- End-to-end experience (from solution design to stakeholder management) beyond pure development
- Mentorship from DBS business, technology and innovation reps
- Immersion in an innovation-driven startup culture at DBS's innovation lab - DBS Asia X
- Network with DBS senior management and seniors from the Skill Enhancement Education & Development (SEED) Programme

Why should I apply

Winner of the 2018 Millennial 20-20 Ones to Watch Award, DBS UNI.CORN is DBS's most prestigious internship programme.

The programme promises to prepare you for the future by honing your technical and business sensibilities through empowerment and ownership of real job opportunities.

Outstanding interns will be given the opportunity to accelerate their career path towards joining the DBS Skill Enhancement Education & Development (SEED) Programme upon graduation.

UNI.CORN+ vs general internships

The DBS UNI.CORN+ Tech Internship is exclusive to tech-grounded Bachelor's and Master's students (penultimate students only). General internships are open to students of all years of studies and disciplines.

Instead of role-specific business-as-usual operations, UNI.CORN+ interns will work in teams, full-time on a specific project. Expect to function like a startup with full autonomy and responsibility for delivering a tech-driven solution to the business.

You will receive essential training ranging from lean startup methodologies to human-centered design to manage this project.

Do I need a tech-related degree?

A tech-related degree or major is not necessary. Applicants need only have knowledge and/or experience in development and programming.

This is required to complete the online coding challenge.

There are no requirements for any specified coding language(s) for the online challenge. You may select the language that you are most comfortable with.

So what kind of candidate is DBS looking for?

We are looking for candidates based on merit and fit - people who can contribute to the bank and possess the right skills to join our talent development programmes.

These candidates carry the DBS PRIDE! Values, and are team players, adaptable, problem-solvers and dedicated.

Being innovative is not just about being tech-savvy; true innovators must be able to embrace change, find smarter answers and develop simpler solutions. Be prepared to be pushed out of your comfort zone as techies, while you confront the challenge of working closely with business project owners.

All set?
