BUSINESS REPORT

The Branch's total income grew 6% in 2024 to MOP 90.2 million. Net interest income increased 8% to MOP 87.6 million benefited from higher interest rates well compensated the decline in fees and other income. Net fee and commission were impacted by softened credit demand while other income declined due to lower customer foreign exchange transactions. Expenses rose 8% to MOP45.1 million mainly driven by higher staff costs.

A total charge of MOP9.3 million under allowances for credit and other losses was reported in the year. Specific allowances were MOP 11.7 million mainly related to the downgrade of a corporate loan, partially offset by a net release in general allowances of MOP2.4 million.

As a result, net profit was MOP31.6 million for the year.

Gross loans and advances increased MOP2,049 million during the year to MOP5,689 million mainly attributable to the increase in syndicated financing. Customer deposits also rose by 45% to MOP3,013 million. To comply with the new Financial System Act, working capital of MOP150 million was injected during the year.

DBS BANK (HONG KONG) LIMITED MACAU BRANCH

INDEPENDENT AUDITOR'S REPORT TO THE MANAGEMENT OF DBS BANK (HONG KONG) LIMITED - MACAU BRANCH

We have audited the financial statements of DBS Bank (Hong Kong) Limited - Macau Branch (the "Branch") set out on pages 4 to 50 which comprise the statement of financial position as at 31 December 2024, and the income statement, the statement of comprehensive income, the statement of changes in equity and cash flow statement for the year then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation of financial statements that give a true and fair view in accordance with Financial Reporting Standards issued by the Government of the Macao Special Administrative Region and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit and to report our opinion solely to you, as a body, in accordance with our agreed terms of engagement and for no other purpose. We do not assume responsibility towards or accept liability to any other person for the contents of this report. We conducted our audit in accordance with Auditing Standards issued by the Professional Committee of Accountants of the Government of the Macao Special Administrative Region. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the preparation of financial statements that give a true and fair view in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

INDEPENDENT AUDITOR'S REPORT TO THE MANAGEMENT OF DBS BANK (HONG KONG) LIMITED - MACAU BRANCH (CONTINUED)

Opinion

In our opinion, the financial statements give a true and fair view of the financial position of DBS Bank (Hong Kong) Limited - Macau Branch as at 31 December 2024, and of its financial performance and cash flows for the year then ended in accordance with Financial Reporting Standards issued by the Government of the Macao Special Administrative Region.

NOTES TO THE FINANCIAL STATEMENTS

1 General Information

The principal activities of DBS Bank (Hong Kong) Limited - Macau Branch (the "Branch") are the provision of banking and related financial services. The address of the Branch's registered office is Rua Santa Clara 5-7E, Lojas C, D, Edif. Ribeiro Macao.

The Branch's head office is DBS Bank (Hong Kong) Limited ("Head Office") which is incorporated and domiciled in Hong Kong. DBS Diamond Holdings Ltd. is the immediate holding company and DBS Bank Ltd. is the intermediate holding company ("Intermediate Holding Company") of DBS Bank (Hong Kong) Limited. The ultimate holding company is DBS Group Holdings Ltd ("DBSH") which is listed, incorporated and domiciled in the Republic of Singapore.

The financial statements were approved for issue by the Branch's management on 24 March 2025.

2 Summary of material accounting policies

The following is a summary of the material accounting policies applied by the Branch and, except where noted, are consistent with those applied in the previous financial year.

(a) Basis of preparation

The financial statements of the Branch are prepared in accordance with Financial Reporting Standards issued by the Government of the Macao Special Administrative Region under Directive No. 44/2020 of the Secretary for Economy and Finance (the "MFRS").

The financial statements are presented in Macao Official Patacas and rounded to the nearest thousand, unless otherwise stated.

The preparation of financial statements in conformity with MFRS requires management to exercise judgement, use estimates and make assumptions in the application of policies and in reporting the amounts in the financial statements. Although these estimates are based on management's best knowledge of current events and actions, actual results may differ from these estimates. Critical accounting estimates and assumptions used that are significant to the financial statements, and areas involving a higher degree of judgement and complexity, are disclosed in note 3.

These financial statements have been prepared under the historical cost convention.

New standards and interpretations issued but is not effective or adopted

Effective from 1 January 2026, the Financial Reporting Standards issued by the Directive of Secretaria para a Economia e Financas No. 44/2020 on 17 March 2020 ("MFRS") will be replaced by the Financial Reporting Standards issued by the Professional Committee of Accountants of the Government of the Macao Special Administrative Region Notice No. 2/2024/CPC on 19 December 2024 ("New MFRS"). The New MFRS is mandatory for adoption from the annual period beginning 1 January 2028. The management is assessing the impact of new MFRS to the Branch's financial statements.

(b) Income recognition

(i) Interest income and interest expense

Interest income and interest expense are recognised on a time-proportionate basis using the effective interest method. The calculation includes significant fees and transaction costs that are integral to the effective interest rate, as well as premiums or discounts.

Interest income is not recognised on non-accrual loans. Non-accrual loans represent loans and advances to customers, the repayments of which are overdue for more than three months or are overdue for less than three months but the management has doubt on the ultimate recoverability of principal or interest in full.

NOTES TO THE FINANCIAL STATEMENTS

2 Summary of significant accounting policies (Continued)

(b) Income recognition (Continued)

(ii) Fee and commission income

Fee and commission income is generally recognised on the completion of a transaction. For a service that is provided over a period of time, fee and commission income is recognised over the period during which the related service is provided or credit risk is undertaken.

Fee and commission income is recorded net of expenses directly related to it.

(c) Financial assets

Initial recognition, classification and subsequent measurement

Purchases and sales of all financial assets are recognised on the date that the Branch enters into the contractual arrangements with counterparties.

Financial assets are initially recognized at fair value, which is generally the transaction price.

IFRS 9 categorises debt-like financial assets based on the business model within which the assets are managed, and whether the assets constitute a "basic lending arrangement" where their contractual cash flows represent solely payments of principal and interest ("SPPI"). Interest is defined as consideration for the time value of money, credit risk, other basic lending risks and may include a profit margin.

Debt instruments are measured at amortised cost when they are in a "hold to collect" ("HTC") business model and have contractual cash flows that are SPPI in nature. The objective of a HTC business model is to collect contractual principal and interest cash flows. Sales are incidental to the objective ad expected to be either insignificant or infrequent.

Derivatives are measured at fair value. Unrealised gains and losses are included in the other assets and other liabilities, respectively to the financial statements.

Reclassification of financial assets

Reclassification of financial assets are prohibited unless the Branch changes its business model for managing financial assets. In practice, this is expected to be infrequent.

Offsetting

Financial assets and liabilities are presented net when there is a legally enforceable right to set off the recognised amounts and there is an intention to settle them on a net basis, or realise the asset and settle the liability simultaneously.

Derecognition

Financial assets are derecognised when the rights to receive cash flows from the financial assets have expired or when they have been transferred together with substantially all risks and rewards of ownership.

NOTES TO THE FINANCIAL STATEMENTS

2 Summary of significant accounting policies (Continued)

(d) Impairment

Expected Credit Loss ("ECL")

ECL are recognised for all financial assets held at amortised cost, debt instruments measured at FVOCI, guarantees and undrawn credit commitments. It represents the present value of expected cash shortfalls over the residual term of a financial asset, guarantee or undrawn commitment.

At initial recognition, allowance is required for ECL resulting from possible default events that may occur within the next 12 months ("12-month ECL"). In the event of a significant increase in credit risk, allowance is required for ECL resulting from possible default events over the expected life of the instrument ("lifetime ECL").

The ECL recognised follows the three-stage model: financial instruments where 12-month ECL is recognised are considered Stage 1; financial instruments which experience a significant increase in credit risk ("SICR") are in Stage 2; and financial instruments with objective evidence of default or are credit-impaired are in Stage 3.

- **Stage 1** Financial instruments are classified as Stage 1 at initial recognition and will remain under Stage 1 unless they experience a SICR or become credit impaired. 12-month ECL is recognised for these instruments.
- **Stage 2** Financial instruments which experience a SICR subsequent to initial recognition, but are not yet credit-impaired, will migrate from Stage 1 to Stage 2. Lifetime ECL is recognised for these instruments.

ECL for stage 1 and stage 2 assets are also known as general allowances.

Significant increase in credit risk ("SICR"): SICR is assessed by comparing the risk of default at reporting date to the risk of default at origination using a range of qualitative and quantitative factors.

For wholesale exposures, a financial instrument is deemed to have experienced a significant increase in credit risk when:

- the observed change in its probability of default ("PD"), as observed by downgrades in the Branch's internal credit risk rating for this instrument between origination and reporting dates, is more than pre-specified thresholds; or
- it is placed on internal credit watchlists for closer scrutiny of developing credit issues.

For retail exposures, days past due is used, supplemented with a PD-based criterion. In any event, all retail and wholesale exposures that are more than 30 days past due are presumed to have experienced a significant increase in credit risk, unless assessed otherwise, and are classified as Stage 2.

Instruments in Stage 2 that no longer exhibit a significant increase in credit risk will be transferred back to Stage 1.

NOTES TO THE FINANCIAL STATEMENTS

2 Summary of significant accounting policies (Continued)

(d) Impairment (Continued)

Expected Credit Loss ("ECL") (Continued)

• **Stage 3** – Financial instruments that become credit-impaired with evidence of default, i.e. non-performing assets, are transferred to Stage 3.

Lifetime ECL is recognised for these assets. ECL for Stage 3 assets are also known as specific allowances.

A Stage 3 exposure that is restructured can be upgraded to Stage 2 if there are reasonable grounds to conclude that the obligor is able to service future principal and interest payments in accordance with the restructured terms. Stage 3 financial assets are written off, in whole or in part, when the Branch has exhausted all practical recovery efforts and has concluded that there is no reasonable expectation of future recoveries.

Measurement of ECLs

ECL are unbiased and probability-weighted estimates of credit losses determined by evaluating a range of possible outcomes, considering past events, current conditions and assessments of future economic conditions at the reporting date. The ECL associated with a financial instrument is typically a product of the probability of default ("PD"), loss given default ("LGD") and exposure at default ("EAD") discounted using the original effective interest rate to the reporting date.

- PD Point-in-time (based on current conditions, adjusted to take into account estimates of future conditions that will impact PD) estimate of the likelihood of default.
- LGD Estimate of the loss arising on default. It is based on the difference between the contractual cash flows due and those that the Branch would expect to receive, including recoveries from collaterals.
- EAD Estimate of the expected credit exposure at time of default, taking into account repayments of principal and interest as well as expected drawdowns on undrawn credit commitments and potential pay-outs on guarantees issued.

The 12-month ECL is calculated by multiplying the 12-month PD, LGD and EAD. Lifetime ECL is calculated by multiplying the lifetime PD, LGD and EAD. The 12-month and lifetime PDs represent the probability of default occurring over the next 12 months and the remaining maturity of the instrument respectively.

In most instances, expected remaining maturity is the same as the remaining contractual life which represents the maximum contractual period over which the Branch is exposed to the credit risk of the borrower.

ECL Modelling- Point-in-Time and Forward-Looking Adjustments

The Branch leverages the models and parameters implemented under the Basel II Internal Ratings-Based ("IRB") framework where possible, with appropriate modifications to meet IFRS 9 requirements.

Other relevant historical information, such as loss experience or proxies will be utilised for portfolios without appropriate Basel models and parameters, with a view to maximise the use of available information that is reliable and supportable.

NOTES TO THE FINANCIAL STATEMENTS

2 Summary of significant accounting policies (Continued)

(d) Impairment (Continued)

ECL Modelling- Point-in-Time and Forward-Looking Adjustments (Continued)

For the wholesale portfolios, credit risk cycle indices ("CCIs") have been developed for the key industries and geographies. CCIs are summary measures that depict broad-based, sector-wide changes in credit risk, which are constructed by comparing the median expected default frequency of firms within each segment against a long-run average. Expected default frequency is in turn a market based point-in-time default risk measure, driven by the market value of firms' assets, asset volatility and leverage. CCIs are then used as inputs to convert the generally more through-the-cycle PDs derived from Basel models/parameters into the point-in-time equivalents by adding the unaccounted portion of cyclical variations, as well as to incorporate forward-looking information. LGDs are determined using historical loss data, which are adjusted for both the latest and forecasted recovery experience.

The Branch relies on a Monte-Carlo simulation approach to consider over 100 probability-weighted forward-looking scenarios in estimating ECL. This involves simulations of alternative CCI scenarios to arrive at an unbiased ECL estimate that are meant to cover all possible good and bad scenarios based on known estimates and currently available information.

For retail portfolios, historical loss experience is used in conjunction with the forecast loss rates which take into account relevant macroeconomic variables, such as property-price and unemployment rate.

(e) AMCM monetary bills

Monetary bills are debt securities issued by the AMCM. These securities are stated at cost adjusted for the amortisation of premiums or discounts arising on acquisition over the periods to maturity, less provision for diminution in their value which is other than temporary. The amortisation of premiums and discounts arising on acquisition of monetary bills is included as part of interest income. Provisions are made for the amount of the carrying value which the Branch does not expect to recover and are recognised as an expense in the income statement as they arise.

(f) Fixed assets

Fixed assets are stated at cost less accumulated depreciation and impairment losses. Depreciation is calculated using the straight-line method over the estimated useful lives of between 3 and 8 years.

Subsequent expenditure relating to fixed assets that has already been recognised is added to the carrying amount of the asset only when it is probable that the future economic benefit associated with the item can be measured reliably. Other subsequent expenditure is recognised as maintenance expense in the income statement during the financial year in which it is incurred.

Fixed assets are subject to an impairment review if there are events or changes in circumstances which indicate that the carrying amount may not be recoverable.

Upon disposal, the difference between the net disposal proceeds and its carrying amount is taken to the income statement.

NOTES TO THE FINANCIAL STATEMENTS

2 Summary of significant accounting policies (Continued)

(g) Financial liabilities

Initial recognition, classification and subsequent measurement

Financial liabilities are initially recognised at fair value. The Branch generally classifies and measures its financial liabilities in accordance with the purpose for which the financial liabilities are incurred and managed.

Other financial liabilities are carried at amortised cost using the effective interest method. These comprise predominantly the Branch's deposit portfolio under "Deposits from customers" and "Due to banks" and "Other liabilities".

Derecognition

A financial liability is derecognized from the statement of financial position when the obligation specified in the contract is discharged, cancelled or expired.

(h) Foreign currency treatment

(i) Functional and presentation currency

Items in the financial statements are measured using the currency of the primary economic environment in which the Branch operates. The financial statements are presented in Macao Official Patacas ("MOP"), which is the functional currency of the Branch.

(ii) Foreign currency transactions and balances

Transactions in foreign currencies are measured using exchange rate at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into MOP at the exchange rate as at the end of the reporting period. Foreign exchange differences arising from this translation are recognised in the income statement.

(i) Cash and cash equivalents

For the purpose of the cash flow statement, cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition including cash and balances with banks, AMCM deposits in excess of minimum requirement, amount due from Head Office and AMCM monetary bills.

(j) Operating leases

Leases where substantially all the risks and rewards of ownership of assets remain with the lessor are accounted for as operating leases. Operating leases are charged to the income statement on a straight-line basis over the period of the lease. When an operating lease is terminated before the lease period has expired, any payment that has to be made to the lessor is recognised as an expense in the period the termination takes place.

NOTES TO THE FINANCIAL STATEMENTS

2 Summary of significant accounting policies (Continued)

(k) Current and deferred taxes

Current income tax for current and prior periods is recognised as the amount expected to be paid or recovered from the tax authorities, using the tax rates and tax laws that have been enacted or substantively enacted by the end of the reporting period.

Tax assets and liabilities of the same type (current or deferred) are offset when a legal right of offset exists and settlement in this manner is intended.

Deferred income tax is provided on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the financial statements. The amount of deferred tax provided is based on the expected manner of realisation or settlement of the carrying amount of assets and liabilities, using tax rates enacted or substantively enacted by the end of the reporting period.

The amount of deferred tax assets recognised takes into account the likelihood the amount that can be used to offset payables taxes for future profits.

(l) Employee benefits

Employee benefits, which include base pay, cash bonuses, share-based compensation, contribution to defined contribution plans and other staff related allowances, are recognised in the income statement when incurred. For defined contribution plans, contributions are made to administered funds on a mandatory, contractual or voluntary basis. Once the contributions have been paid, the Branch has no further payment obligations.

Employee entitlement to annual leave is recognised when they accrue to employees. A provision is made for the estimated liability for annual utilized leave as a result of services rendered by employees up to the end of the reporting period.

3 Critical accounting estimates and assumptions

The Branch's accounting policies and use of estimates are integral to the reported results. Certain accounting estimates require management's judgement in determining the appropriate methodology for valuation of assets and liabilities. Procedures are in place to ensure that methodologies are reviewed and revised as appropriate. The Branch believes its estimates for determining the valuation of its assets and liabilities are appropriate.

NOTES TO THE FINANCIAL STATEMENTS

3 Critical accounting estimates and assumptions (Continued)

(a) Impairment of financial assets

It is the Branch's policy to recognise, through charges against profit, allowances in respect of estimated and inherent credit losses in its portfolio as described in Note 2(d).

ECLs are unbiased and probability-weighted amounts determined by evaluating a range of possible outcomes and taking into account past events, current conditions and assessments of future economic conditions, which will necessarily involve the use of judgement.

The Stage 1 and Stage 2 allowances are determined after taking into account historical data and management's assessment of the current economic and credit environment, country and portfolio risks, as well as industry practices.

In estimating Stage 3 ECL allowances, the Branch assesses the gap between borrowers' obligations to the Branch and their repayment ability. The assessment takes into account various factors, including the economic or business outlook, the future profitability of the borrowers and the liquidation value of collateral. Such assessment requires considerable judgement.

(b) Current and deferred income taxes

Judgement is involved in determining the provision for current and deferred income taxes. The Branch recognises current tax liabilities for expected tax issues based on reasonable estimates of whether additional taxes will be due, and recognises deferred tax assets for amount of tax losses ascertained could be utilized within the expiry date.

differences:

	2024 MOP'000	2023 MOP'000
Depreciation allowances	(43)	(42)
	(43)	(42)

Current tax comprises of Macao complementary tax. According to Macao complementary tax law, Macao complementary tax is levied at progressive rates ranging from 3% to 9% on the taxable income above MOP32,000 but below MOP300,000, and thereafter at a fixed rate at 12%. For the year 2024, the special tax incentive was provided to effect that the tax free income threshold was increased from MOP32,000 to MOP 600,000, and the profit thereafter being taxed at a fixed rate of 12%. The tax on the Branch's profit before tax differs from the theoretical amount that would arise using the Macao complementary tax rate applicable to profits of the Branch and as follows:

	2024 MOP'000	2023 MOP'000
Profit before income tax	35,847	44,968
Tax calculated at 12% Effect of progressive tax rate before 12% Special complementary tax incentives (Over)/under provision for prior years Expenses not deductible for tax purposes Others	4,302 (17) (55) (14) 11	5,396 (17) (55) 1 (5)

	Balance with AMCM Allowances for credit and other losses	159,325 (7)	112,076 (4)
		159,318	112,072

According to the statutory requirement, the Branch is required to maintain a minimum deposit balance with AMCM for liquidity purposes. The required MOP current deposit balance should not be less than 70% of the aggregate of the following amount:

- (a) 3% on all liabilities which are repayable on demand;
- (b) 2% on all liabilities which are repayable within 3 months (3 months inclusive) except for those already counted in (a);
- (c) 1% on all liabilities which are repayable beyond 3 months.

At 31 December 2024, the minimum deposit required were MOP51,502,000 (2023: MOP34,986,000).

	1,851,863	4,194,352

(b) Lease commitments

At the end of the reporting period, the total future minimum lease payments under non-cancellable operating leases were as follows:

	2024 MOP'000	2023 MOP'000
Within 1 year More than 1 year	1,058	1,410 1,058
	1,058	2,468

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management

Risk governance

Under the risk management approach, the Board of Directors, through the Board Risk Management Committee (BRMC), sets risk appetite, oversees the establishment of enterprise-wide risk management policies and processes, and establishes risk appetite limits to guide the Head Office's risk taking.

(a) Credit risk

Credit risk arises from the Branch's daily activities in various businesses. These activities include lending to retail, corporate and institutional customers. It includes the risk of lending, as well as pre-settlement and settlement risk of foreign exchange and debt securities.

Credit Risk Management

The Branch follows the Head Office's approach to credit risk management which comprises the following building blocks:

Policies

The dimensions of credit risk and the scope of its application are defined in DBSH's Credit Risk Management Policy. Senior management sets the overall direction and policy for managing credit risk at the enterprise level.

DBSH's Core Credit Risk Policies (CCRPs) established for Consumer Banking/Wealth Management and Institutional Banking set forth the principles by which DBS conducts its credit risk management and control activities. These policies, supplemented by a number of operational standards and guides, ensure consistency in identifying, assessing, underwriting, measuring, reporting and controlling credit risk across DBS, and provide guidance in the formulation of business-specific and/or location-specific credit risk policies and standards.

The operational standards and guides are established to provide greater details on the implementation of the credit principles within DBSH's CCRPs and are adapted to reflect different credit environments and portfolio risk profiles.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(a) Credit risk (Continued)

Credit Risk Management (Continued)

• Risk Methodologies

Credit risk is managed by thoroughly understanding our wholesale customers – the businesses they are in, as well as the economies in which they operate. It is also managed through statistical models and data analytics for retail customers.

The assignment of credit risk ratings and setting of lending limits are integral parts of DBS' credit risk management process, and we use an array of rating models for our wholesale and retail portfolios. Most of these models are built internally by DBSH using DBSH's loss data.

Wholesale borrowers are assessed individually and further reviewed and evaluated by experienced credit risk managers who consider the relevant credit risk factors in the final determination of the borrower's risk. For some portfolios within the SME segment, DBS also uses a programme-based approach to achieve a balanced management of risks and rewards. Retail exposures are assessed using internally and externally available customer behaviour records. Credit applications are proposed by the business units, and are independently assessed by the credit risk managers.

Pre-settlement credit risk for trade products arising from a counterparty potentially defaulting on its obligations is quantified by evaluation of the marked-to-market value plus potential future exposure. This is included within the Head Office's overall credit limits to counterparties for internal risk management.

• Concentration Risk Management

The Head Office's risk management processes aim to ensure that an acceptable level of risk diversification is maintained across the Head Office on an ongoing basis. Limits are established and regularly monitored in respect of country exposures and major industry groups, as well as for single counterparty exposures.

Country Risk

Country risk refers to the risk of loss due to events in a specific country (or a group of countries). This includes political, exchange rate, economic, sovereign and transfer risks. The Head Office manages country risk through the requirements of DBSH's CCRPs.

Transfer risk limits for individually reviewed countries are set based on country-specific business considerations as well as the acceptable potential loss according to DBSH's Risk Appetite.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(a) Credit risk (Continued)

Credit Risk Management (Continued)

• Environmental, Social and Governance Risk

Responsible financing, covering environmental, social and governance (ESG), remains a key focus area which impacts our financing, investing and risk management decisions across DBSH. DBSH recognizes the material impact of our financing and investments on environment and communities and the key role financial institutions can play in assisting customers to manage ESG issues and transition to low carbon economy. DBSH's net zero targets and increasing recognition of ESG risks reflects the DBS Group's efforts to decarbonize its portfolio and focus on long-term sustainable clients.

DBSH considers ESG risk management as critical to ensure a sustainable lending and investment portfolio. Following establishment of DBSH's Board Sustainability Committee and incorporation of environmental risk considerations into the DBS Group's and the Head Office's Risk Appetite statements in 2022, DBSH further enhanced the Group Responsible Financing Standard documents which provide the overarching approach to responsible financing and enhanced ESG assessment required when financing transactions with elevated ESG risks. The requirements of this Standard represent the minimum standards for DBSH, and it has also sought alignment, where possible, with international standards and best practices. Where significant ESG issues are identified, escalation is required to Institutional Banking Group Sustainability and Risk Management ESG teams in DBSH for further guidance prior to approval by the Credit Approving Authority.

• Credit Stress Testing

The Head Office performs various types of credit stress tests which are either driven by regulators or internal requirements and management. Credit stress tests are performed at the total portfolio or sub-portfolio level and are generally conducted to assess the impact of changing economic conditions on asset quality, earnings performance, and capital adequacy and liquidity.

• Processes, Systems and Reports

The end-to-end credit process is continually being reviewed and improved through various front-to-back initiatives involving business, operations, risk management and other key stakeholders.

Non-performing assets

The Branch classifies its credit facilities as 'Performing Assets' or 'Non-performing assets'.

In general, impairment allowance is made when there is objective evidence of impairment as a result of the occurrence of loss events that will have an impact on the estimated future cash flows.

When required, the Branch will take possession of collateral and dispose of them as soon as practicable. Realised proceeds are used to reduce the outstanding indebtedness.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(a) Credit risk (Continued)

Credit Risk Mitigants

• Collateral Received

Where possible, the Head Office takes collateral as an secondary source of repayment. This includes, but is not limited to, cash, marketable securities, real estate, trade receivables, inventory, equipment, and other physical and/or financial collateral. The Head Office may also take fixed and floating charges on the assets of borrowers.

Policies are in place to determine the eligibility of collateral for credit risk mitigation. Collateral is generally diversified and periodic valuations of collateral are required.

In times of difficulty, the Head Office will review the customer's specific situation and circumstances to assist them in restructuring their financial obligations.

Maximum exposure to credit risk

The maximum exposure to credit risk for financial assets recognised on the statement of financial position is the carrying amount. For contingent liabilities, the maximum exposure to credit risk is the maximum amount the Branch would have to pay if the instrument is called upon. For undrawn facilities, the maximum exposure to credit risk is the full amount of the undrawn credit facilities granted to customers.

Analysis of Collateral

Whilst the Branch's maximum exposure to credit risk is the carrying amount of the assets or, in the case of off-balance sheet instruments, the amount guaranteed, committed, accepted or endorsed, the likely exposure may be lower due to offsetting collateral, credit guarantees and other actions taken to mitigate the Branch's exposure.

The description of collateral for each class of financial asset is set out below:

Balances with central banks, government securities and treasury bills and due from banks.

Collateral is generally not sought for these assets.

Loans and advances to customers, contingent liabilities and commitments

Certain loans and advances to customers, contingent liabilities and commitments are typically collateralised to a substantial extent. In particular, residential mortgage exposures are generally fully secured by residential properties. Income-producing real estate, which is a sub-set of the Specialised Lending exposure, are fully secured by the underlying assets financed.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(b) Market risk

Market risk is the risk of loss arising from adverse changes in interest rates, foreign exchange rates, equity prices, credit spreads and commodity prices, as well as related factors.

The Head Office's Market Risk Management Policy sets out the overall approach towards market risk management. The Policy is supported by standards and guides, which facilitates the identification, measurement, control, monitoring and reporting of market risk in a consistent manner. They also set out the overall approach, requirements and controls governing market risk stress testing.

The Hong Kong Market and Liquidity Risk Committee ("HK MLRC"), which reports to the Hong Kong Risk Executive Committee, oversees the Head Office's effectiveness of market and liquidity risk management framework including policies, models, systems, processes, information and methodologies.

Majority of the Branch's market risk arises from (i) positions taken for client-facilitation; (ii) positions taken to manage the interest rate risk of the retail and commercial banking assets and liabilities; (iii) debt securities held for liquidity risk management.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(b) Market risk (Continued)

Interest rate risk in the banking book

Interest rate risk in the banking book (IRRBB) arises from mismatches in the interest rate profile of assets, liabilities, and capital instruments. Considering the size of Macau Branch loans and deposits, there is no loan prepayment assumption applied, and non-maturity deposits are assumed not to be repriced under earning perspective. The IRRBB exposures are measured on a monthly basis.

(c) Operational and technology risk

Operational risk is inherent in our business activities and may arise from inadequate or failed internal processes, people or systems, or from external events. The Branch's objective is to keep operational risk at appropriate levels, taking into account the markets the Branch operates in, the characteristics of the businesses as well as our economic and regulatory environment.

Operational Risk Management

The Branch follows the Head Office's approach to operational risk management which comprises the following building blocks:

Policies

The Head Office Operational Risk Management (ORM) Policy sets our overall approach for managing operational risk in a structured, systematic and consistent manner.

There are policies, standards, tools and programmes in place to govern ORM practices in the Head Office. These include corporate operational risk policies and standards that are owned by the respective corporate oversight and control functions. The key policies address risk areas relating to technology, compliance, fraud, money laundering, financing of terrorisms and sanctions, new product and third party arrangements.

Risk Methodologies

The Head Office adopts the standardised approach to compute operational risk regulatory capital.

To manage and control operational risk, we use various tools including risk and control self-assessment, operational risk event management and key risk indicator monitoring.

The Head Office's Three Lines Model adopts one common risk taxonomy, and a consistent risk assessment approach to managing operational risks. Risk and control self-assessment is conducted by each business or support unit to identify key operational risk and assess the effectiveness of internal controls. When control issues are identified, the units develop action plans and track the resolution of the issues.

Operational risk events are classified in accordance with Basel standards. Such events, including any significant incidents that may impact the Head Office's reputation, must be reported based on certain established thresholds. Key risk indicators with pre-defined escalation triggers are employed to facilitate risk monitoring in a forward-looking manner.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(c) Operational and technology risk (Continued)

Additional methodologies are in place to address subject-specific risks, including, but not limited to, the following:

Technology risk

Technology risk refers to the potential for financial losses, operational disruptions, and reputational damage arising from system failures or security breaches. These include cyber attacks, software or hardware failures and data leakage, which can affect business operations and tarnish the Group's brand.

In an ever-evolving technological landscape, the Head Office embraces the challenge of remaining resilient to support its customers. While risks arise, the Head Office stands firm against an increasing complex cyber threat environment. It recognises the importance of safeguarding against unauthorized access to its customer accounts. The Head Office is investing in operational resilience to exceed the expectations of its customers and regulators while preventing service disruptions. Through active participation in industry working groups and dialogue with its third-party partners, the Head Office seeks to reduce risks of outages and reduce downtime. The Head Office's commitment to continuous investment in technical controls and regular monitoring and reporting enhances its risk governance and oversight.

Technology Risk Management

The Head Office's approach to technology risk management comprises the following building blocks:

Policies

The Head Office's technology risk appetite statement has a zero-tolerance mindset for operation and technology risks that can pose a risk to its franchise, cause financial loss and impact its reputation. The Head Office seeks to conduct its business activities in a manner which does not give rise to:

- a) Significant or prolonged inability to carry on business as usual, as a result of business disruption,
- b) Illegality or permanent withdrawal of license,
- c) Operational risk losses exceeding 80% of the operational risk regulatory capital and/or,
- d) Catastrophic damage to its reputation due to erosion of customer trust or other factor(s)

The Head Office's IT risk methodology is a structured approach to identifying, assessing and managing risks associated with information technology. Key components include:

- 1. Risk Identification: Recognizing potential threats and vulnerabilities affecting IT assets
- 2. Risk Assessment: Evaluating the likelihood and impact of identified risks using quantitative and qualitative methods
- 3. Risk Mitigation: Developing strategies to reduce risks by implementing controls
- 4. Monitoring and Review: Continuously tracking risk factors and the effectiveness of mitigation strategies to adapt to new threats

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(c) Operational and technology risk (Continued)

Technology Risk Management (Continued)

Processes, Systems and Reports

IT governance ensure alignment between IT strategies and business objectives. This includes:

- 1. Establishing a governance framework: A structured governance model defines roles and responsibilities and decision-making processes to ensure IT initiatives support business strategies;
- 2. Continuous communication: Ongoing communication between IT and Business Units ensure mutual understanding of goals and priorities;
- 3. Defining risk metrics: Create key risk indicators that highlight the potential risks that could impact customer journeys and experience;
- 4. Involving stakeholders: Engage cross functional teams in risk management to align IT projects with business needs and customer demands; and
- 5. Adapting and improving controls: Regularly review and design controls to adapt to changing business environment and technology trends

Cybersecurity risk remains a top priority for our bank. At DBS, we place a strong emphasis on safeguarding our people, information, network, equipment, and applications in alignment with the bank's risk tolerance. To ensure we are proactive in addressing cyber threats, DBS allocates significant resources towards enhancing our cyber hygiene and control environment. We are committed to staying in tandem with the ever-evolving cyber threat landscape. We conduct regular assessments to validate the effectiveness of our controls and to obtain assurance that our control framework remains resilient in the face of emerging and evolving threats.

Compliance risk

Compliance risk refers to the risk of the Branch not being able to successfully conduct our business because of any failure to comply with laws, regulatory requirements, industry codes or standards of business and professional conduct applicable to the financial sector.

This includes, in particular, laws and regulations applicable to the licensing and conducting of banking or other financial businesses, financial crime such as anti-money laundering ("AML") and countering the financing of terrorism ("CFT"), fraud (including digital payment scams) and bribery/corruption. We maintain a compliance programme designed to identify, assess, measure, mitigate and report on such risks through a combination of policy and relevant systems and controls.

To counter financial crime and sanctions risks, The Head Office established minimum standards for the Head Office's business and support units to manage the Head Office's actual and/ or potential risk exposures. In addition, standards aimed to provide the end-to-end management for fraud and related issues at the unit and geographical levels, are implemented through a fraud management programme. Lastly, the Head Office implemented surveillance and compliance testing controls where necessary to obtain assurance that the control framework is operating effectively.

The Head Office also provides relevant training and implements assurance processes. We strongly believe in the need to promote a strong compliance culture as well, and this is developed through the leadership of our Board and senior management.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(c) Operational and technology risk (Continued)

New product and third party risks

Each new product, third party arrangement is subject to a risk review and sign-off process, where relevant risks are identified and assessed. Variations of existing products or services and existing third party arrangements and ecosystem partnerships are also subject to a similar process.

Other mitigation programmes

A robust business continuity management programme is in place to ensure that critical banking services can continue in the event of unforeseen events or business disruptions. This includes a crisis management plan to enable quick response to manage incidents.

Exercises are conducted annually, simulating different scenarios to test business continuity plans and crisis management protocol. The effectiveness of these exercises as well as the Head Office's business continuity readiness and its alignment to regulatory guidelines are communicated and attested by senior management to the BRMC annually.

To mitigate losses from specific risk events which are unexpected and significant, the Head Office purchases group-wide insurance policies under the Group Insurance Programme. These include policies relating to crime and professional indemnity, directors and officers liability, cyber risk, property damage and business interruption, general liability and terrorism.

Processes, Systems and Reports

Robust internal control processes and systems are integral to identifying, monitoring, managing and reporting operational risk.

All units are responsible for the day-to-day management of operational risk in their products, processes, systems and activities, in accordance with the variance frameworks and policies. The RMG Operational Risk unit and other corporate oversight and control functions:

- Oversee and monitor the effectiveness of operational risk management;
- Assess key operational risk issues with the units; and
- Report and/or escalate key operational risks to risk committees with recommendations on appropriate risk mitigation strategies.

The Head Office has in place an integrated governance, risk and compliance system with aligned risk assessment methodology, common taxonomy and unified processes for the Three Lines Model.

The Head Office has in place an operational risk landscape profile which provides the Board and senior management with an integrated view of the Head Office's operational risk profile periodically, across key operational risk areas and business lines.

NOTES TO THE FINANCIAL STATEMENTS

22 Financial risk management (Continued)

(d) Liquidity risk

Liquidity risk arises from its obligations to honor withdrawals of deposits, repayments of borrowed funds at maturity, and commitments to extend loans to our customers.

The Branch seeks to manage its liquidity in a manner that ensures that its liquidity obligations would continue to be honored under normal as well as adverse circumstances.

The Head Office Liquidity Risk Management Policy sets out the overall approach towards liquidity risk management and describes the range of strategies employed by the Branch to manage its liquidity. These strategies include maintaining an adequate liquidity buffer, having diversified sources of liquidity, and having robust internal control processes. In the event of a potential or actual crisis, the Head Office has in place a set of liquidity contingency and recovery plans to ensure that we maintain adequate liquidity.

The primary measure used to manage liquidity within the tolerance defined by the HK MLRC for the Branch is cash flow maturity mismatch analysis. This form of analysis is performed on a regular basis under normal and adverse scenarios. It assesses the adequacy of the counterbalancing capacity to fund or mitigate any cash flow shortfalls that may occur as forecasted in the cash flow movements across successive time bands. To ensure that liquidity is managed in line with the Risk Appetite, core parameters such as the types of scenarios, the survival period and the minimum level of liquid assets, are pre-specified for monitoring and control. Robust internal control processes and systems support our overall approach for identifying, measuring, aggregating, controlling and monitoring liquidity risk of the Branch.

Liquidity risk control measures, such as liquidity-related ratios, are complementary tools to the cash flow maturity mismatch analysis and they are performed regularly to obtain deeper insights and finer control over the liquidity profile of the Branch.

Oversight relating to the management of liquidity risk across the Head Office, including the Branch, is provided by the HK MLRC, which reports to the Hong Kong Risk Executive Committee. The Hong Kong Asset and Liability Committee regularly reviews the balance sheet composition, trends in loans and deposits, utilization of wholesale funding, momentum in business activities, market competition, economic outlooks, market conditions and other factors that may affect liquidity in the continual refinement of the Branch's funding strategy.

23 Material related party transactions

(a) Head Office, Intermediate Holding Company and fellow subsidiary

As part of the Branch's normal course of business, it enters into various transactions with Head Office, Intermediate Holding Company and fellow subsidiary on normal commercial terms. These transactions include interbank placements, taking of deposits, contingent liabilities and commitments.

The Head Office has policies on credit processing for its affiliates, as well as transactions with its affiliates and related parties. These transactions must be conducted on arm's length basis using credit standards, terms and conditions that are comparable to similar transactions with non-affiliates.

NOTES TO THE FINANCIAL STATEMENTS
